The vse of this Table.

WHofocus shall be disposed to make vse of this Table, as desirous to know the distance betweene any two Cities or Townes contained in the same, let him seeke the places desired in the vpper and side Catalogues of Townes, and direct his eye from either place, betweene the lines, both from above and from the side, and where the lines meete in square, hee shall finde the number of miles: For example, if hee would know how farre *Lincolne* is from *Exceter*, finde *Lincolne* in the side, and carie your eye directly from thence betweene the lines untill you come vnder *Exceter*, and where they meete in square he shall finde 120. which is the distance of miles.

If you finde any Towne on the side which will not meete in square from the desired Towne above, then looke for the Towne which you finde in the side, above: For Example, if you desire to knowe the distance betweene *Gloucester* and *Oxford*, if you looke *Gloucester* in the side you cannot bring *Oxford* in a square with *Gloucester*, but if you looke *Gloucester* in the side, and *Oxford* above, you shall finde the square and the distance 37. miles, and so of any other.

Intreating him friendly to censure any error in the calculation or impression, which cannot be but easily founde, comming vnder the view of men of all parts of the Kingdome, who are better acquainted with distances neere their owne abode, then any one man may generally be. But howsoever he shall finde the conceit vscfull and necessarie, if he be occasioned to trauell much.

It is to be vnderstoode, that by reason of the *Seuerne*, that diuides *Wales* fro *Cornwall*, *Somerset*, &c. that the distances betweene the Townes of either side, cannot be precisely set downe, for that there is great difference, betweene the land trauaile, and passages by water, as men take according to their liking.

I haue not done this altogether by mine owne obseruation, though I haue trauailed most parts of the Kingdome, And therefore haue taken the benefit of the Mappes of the same. And there may some errours arise, as wayes lye curuing or direct, passable or not, and as Trauailers are disposed to coast the Countries to make choyse of their wayes. Such as it is, I willingly recommend it to all that please to make vse of it, as a labour intricate, and neuer before inuented.

Inuented and performed by
IOHN NORDEN.

It is to be understood, that by reason of the Severne, that divides Wales from Cornwall, Somerset, &c. that the distances between the Townes of either side, cannot be precisely set downe, for that there is great difference, between the land traualle, and passages by water, as men take according to their liking.

I have not done this altogether by mine owne obseruation, though I have traualled most parts of the Kingdome. And therefore have taken the benefit of the Mappes of the same. And there may some errors arise, as wayes lye curving or direct, passable or not, and as Trauailers are disposed to coast the Countries to make choyse of their wayes. Such as it is, I willingly recommend it to all that please to make vse of it, as a labour intricate, and neuer before inuented.

The vse of this Table.

Whoever shall be disposed to make vse of this Table, as desired to know the distance betweene any two Cities or Townes containd in the same, let him seeke the places desired in the vpper and side Catalogues of Townes, and direct his eye from either place, betweene the lines, both from above and from the side, and where the lines meete in square, hee shall finde the number of miles: For example, if hee would know how farre Lincolne is from Exceter, finde Lincolne in the side, and carie your eye directly from thence betweene the lines vntill you come vnder Exceter, and where they meete in square he shall finde 180. which is the distance of miles.

If you finde any Towne on the side which will not meete in square from the desired Towne above, then looke for the Towne which you finde in the side above. For Example, if you desire to knowe the distance betweene Gloucester and Oxford, if you looke Gloucester in the side you cannot bring Oxford in a square with Gloucester, but if you looke Gloucester in the side, and Oxford above, you shall finde the square and the distance 37. miles, and so of any other.

Intreating him friendly to censure any error in the calculation or impression, which cannot be but easily founde, coming vnder the view of men of all parts of the Kingdome, who are better acquainted with distances neere their owne abode, then any one man may generally be. But howsoever he shall finde the conceit vsfull and necessarie, if he be occasioned to trauell much.

Inuented and performed by
JOHN NORDEN.
